

IDENTIFY • MONITOR • IMPROVE

STRING SAMPLING

Managing mastitis in dairy cows and improving herd health are two significant challenges for dairy farmers. String sampling using the QualiTru system is a proven, proactive measure. Prevent costly mastitis by regularly gathering data to monitor trends, so the dairy manager can identify issues early, improve herd health, and increase profits.

CATCH MASTITIS EARLY

- String sample regularly to prevent loss
- Use string sampling as a diagnostic tool to complement your farm Quality System
- Monitor pen somatic cell count
- Facilitate the identification of mastitis-causing pathogens
